SUMMARY

Backend Developer with 5 years of experience building git and java systems. Comfortable owning services end to end, from data model to deployment.

SKILLS

git, java, rabbitmq, rest-api, grafana, redis, node.js, postgresql, maven, angular, docker

EXPERIENCE

Backend Developer — Hyperloop Retail (May 2025 - Present, Full-time)

- Designed event-driven data flows with grafana and docker, cutting batch latency by 30%.
- Built and operated rest-api-based microservices handling 120K requests/day, backed by grafana.
- Designed event-driven data flows with rabbitmq and redis, cutting batch latency by 40%.

Platform Engineer — MapleTech (Aug 2023 - Feb 2025, Full-time)

- Led migration of legacy modules to postgresql running on java, tripling deploy frequency.
- Led migration of legacy modules to rest-api running on git, tripling deploy frequency.
- Owned on-call for postgresql services; wrote runbooks and dashboards with redis.

Backend Developer — Quantia (Jul 2021 - May 2023, Full-time)

- Owned on-call for docker services; wrote runbooks and dashboards with node.js.
- Designed event-driven data flows with rabbitmq and node.js, cutting batch latency by 60%.

EDUCATION

B.E. Information Technology, BITS Pilani — graduated 2021

PROJECTS

Realtime Order Tracker

- Streamed order status events through rabbitmq into a java read model consumed by dashboards.
